EXPERIENCE

Software Engineering Intern

May 2025 - Aug. 2026

Geotab - Solutions Delivery Management

Oakville, ON

- Built full-stack telemetry dashboards on BigQuery for 1,000+ IoT units, used by 40-50 staff including executives; moved them from Apps Script to GCP containers with a GitLab CI pipeline.
- Wrote BigQuery SQL across thousands of tables processing terabytes daily to find production GPS and FOTA data; built a hackathon search tool over them with Gemini and MCP.
- Built Node.js Chrome extensions that crawl and validate firmware test pages, shipped via GitLab merge requests and code review, cutting manual verification time by 80%.
- Shipped changes to an internal engineering dashboard through continuous integration and code review, automating secure firmware deployments over SSH.

Performance Engineering Intern

Jan. 2024 - Aug. 2024

AMD - Technical Marketing Labs

Markham, ON

- Built a modular Python benchmark framework, unit-tested with pytest, that launches games via Steam/Epic APIs and navigates UIs by image matching, cutting runtimes by 60%.
- Programmed a C/C++ Arduino tool measuring sub-millisecond input latency by syncing simulated inputs with photoelectric sensors, validating driver optimizations (Anti-Lag).
- Built CLI tools and visualization workflows in Python, Java, and SQL to aggregate and parse power-draw, frame-time, and telemetry data for engineering teams.

Automation Engineering Intern

May 2023 - Aug. 2023

Bombardier Aerospace - Supplier Quality

Toronto, ON

- Built TypeScript/Node.js data pipelines feeding Power BI, with validation logic that flags anomalies in audit records, reducing compliance report generation time by over 70%.
- Refactored monolithic legacy VBA scripts into modular TypeScript templates, establishing coding standards adopted across engineering workflows.

PROJECTS

Forkable | Next.js, TypeScript, PostgreSQL, Prisma, Redis

2026

- Built a full-stack version-control platform for recipes on a 21-model PostgreSQL schema, with an LCS diff engine, blame, restore, and raw-SQL ranked full-text search (tsvector + GIN).
- Set up GitHub Actions CI (lint, typecheck, 83 Vitest unit tests, build) with Vercel deploys; kept counters consistent with transactional writes and added Zod validation and Redis rate limiting.

TrainTripTime | Python, GTFS, systemd, Raspberry Pi

2026

- Built a dependency-free Python commute planner that works backward from an arrival time through GO Transit and bus schedules, merging live GTFS-realtime feeds that fail soft.
- Streamed a 118 MB timetable feed into a 1 MB index, cutting peak memory from about 160 MB to 100 MB; self-hosted on a Raspberry Pi with systemd socket activation and idle shutdown.

EDUCATION

Toronto Metropolitan University

Expected Graduation: May 2027

Bachelor of Science, Computer Science (Co-op) | GPA: 3.96/4.33, Dean's List

Toronto, ON

- **Relevant Coursework:** Data Structures, Operating Systems, Databases, Software Engineering, AI

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, C, C++, HTML/CSS

Frameworks & Data: React, Next.js, Node.js, Flask, PostgreSQL, Prisma, BigQuery, Oracle SQL, Redis

Tools & DevOps: Git, GitLab CI, GitHub Actions, Docker, GCP, pytest, Linux, Claude Code, Codex
